Service Standard Payments

Did you know that if Synergy or Western Power does not meet certain service standards, you might be eligible for a Service Standard Payment?

Synergy and Western Power have a range of Service Standard Payments applicable to eligible customers if our respective service delivery falls short of the performance standards outlined in the Code of Conduct for the Supply of Electricity to Small Use Customers (Code of Conduct) or the Network Quality and Reliability of Supply Code.

Synergy's Service Standard Payments cover the following events:

Reconnections:

A customer can claim a payment of \$60 a day from Synergy for each day a reconnection is delayed beyond regulated time frames, due to Synergy's or Western Power's actions, up to a maximum of \$300.* The claim must be made within three months of the late reconnection.

Wrongful disconnection:

In the event that Synergy arranges for a customer's electricity supply to be disconnected other than in accordance with Code of Conduct requirements, Synergy is required to make payment to the customer of \$100 per day for each day the customer remains wrongfully disconnected.*

Customer service:

If a customer's written complaint is not acknowledged within 10 business days, or responded to by addressing the matter in the complaint within 20 business days, a customer can claim a \$20 payment from Synergy.* The claim must be made within three months of the late, or lack of, acknowledgment or response.

Western Power's Service Standard Payments cover the following events:

Notification of planned interruption:

An eligible customer may claim a \$20 payment when 72 hours notice of a planned power interruption hasn't been given, except in the case of an emergency or if the interruption was requested by either the customer or the retailer.** The claim must be made to Western Power within 60 days of the interruption.

Extended interruptions:

An eligible customer may claim a \$120 payment if the electricity supply to the customer's home was interrupted for more than 12 continuous hours, except in the case of an emergency or if the interruption was requested by the customer or by the retailer.** The claim must be made to Western Power within 60 days after the interruption ceases.

Customer service:

A customer may claim a \$20 payment if a written complaint is not acknowledged within 10 business days or responded to within 20 business days.* The claim must be made to Western Power within three months of the late, or lack of, acknowledgement or response.

Wrongful disconnection:

If Western Power disconnects a customer's electricity supply other than as authorised by the Code of Conduct or by Synergy, Western Power is required to pay the customer \$100 per day for each day the customer was wrongfully disconnected, except if the disconnection occurred for reasons outside of Western Power's control.*

For more information about eligibility and how to apply for Western Power's Service Standard Payments, go to westernpower.com.au

To view the Code of Conduct in full, visit synergy.net.au/terms

* A customer is someone consuming up to 160MWh per year.

** An eligible customer is a customer who consumes no more than 50MWh of electricity per year.

Here are some simple tips to help you improve your energy efficiency around the home.

Cooling and heating

- Don't crank the air conditioner. Set it at 24°C in summer and 18°C in winter, and remember to cool or heat your house slowly.
- Close curtains to keep the heat out in summer, and open them in winter to let the heat in. A door snake can also keep cold or warm air from escaping.
- Keep your air conditioner running smoothly. Clean the filters and don't forget to get it serviced regularly.

Audio and home entertainment

- Don't leave the TV on for the sake of it. Once you or the kids lose interest, it's time to switch it off.
- Switch your appliances off at the wall. Leaving appliances on standby mode still uses power, increasing your electricity costs.
- Unplug your charger, many still use power even when they're not charging anything.

Laundry

- Soak up the WA sun and use your clothesline whenever you can. If you must use a dryer, clean out your lint filter regularly.
- Wash your clothes on a cold cycle. It could also help keep your colours bright, too.
- If you're upgrading your machine, check out a front loader as they are usually more efficient than top loaders.

Hot water

- Consider lowering the temperature of your hot water system and turn it off altogether when you go away.
- Make the sun work for you and go solar. Solar hot water systems use less power than electric ones.
- Keeping your hot water system fan free of dust and fluff could also help you save on energy use and running costs.

Refrigeration

- Keeping your fridge between 3 to 5 °C and freezer at around -18°C can make all the difference, so don't overcool it.
- Keep the cold in. Check and replace the seals on the doors, dust off the condenser coil at the back, and defrost your freezer regularly.
- Don't under or overfill your fridge or freezer. Try to find the balance between sparse and overcrowded shelves.

Lighting

- Only light the rooms you're using or make it cosier by using a lamp. Remember to flick off any switches when you leave a room.
- Ditch incandescent lights for good by changing any old bulbs to energy-saving fluorescent or LED lights.
- Use motion sensor and solar lights outside to light your path and guide your way.

Computers and appliances

- Try and choose the highest star energy rating when upgrading your appliances.
- The bigger the screen that you choose, the more power it will use. Set your screen to sleep generally when you're not using it.
- If you are making a cup of tea or coffee, only fill the kettle with the amount of water you need.

Cooking

- Keep your appliances in top shape. Clean your rangehood or exhaust fan, check your oven seals and use pots and pans with tight fitting lids and flat bases.
- Resist the urge to check on the oven. Opening the door lowers the temperature, and takes more energy to heat it back up.
